Your Vision, Our Future

Digital Stereo Recorder

Original size

DS-2200

Attachable stereo microphone ME51S

The DS-2200 digital voice recorder is ideal for professionals who value first-class recording quality as well as extensive functionality. Slim, ergonomic and elegant with a full-metal body, it also meets the design requirements of a top executive business tool.

By simply attaching the stereo microphone supplied, important interviews can be saved in stereo high quality. There are four recording modes to choose from so the user can give priority to either the best possible sound quality or the longest recording.

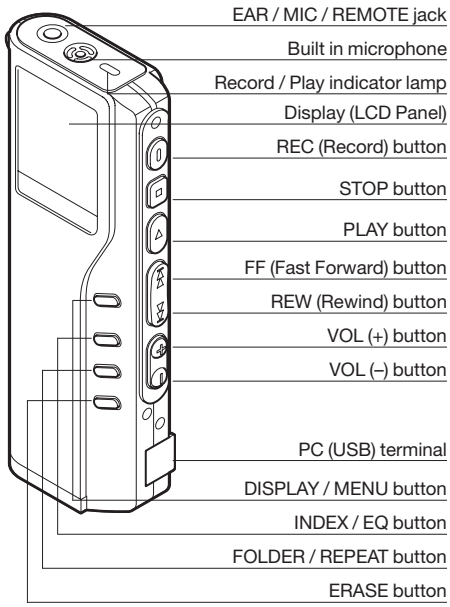
The DS-2200 may be slipped into a jacket pocket or briefcase. It is therefore always close at hand to save ideas wherever inspiration strikes. The remote control converts into a clip microphone for hands free dictation. This lets the user monitor him or herself giving presentations, for example, or take notes while scanning through a report.

Over four hours may be saved in the SHQ mode to the 128MB xD-Picture Card provided. However, since new cards can be inserted when the first is full, the recording times are virtually endless – perfect for the busy professional on the move.

Downloading the voice files is fast and simple using the USB docking station supplied. Alternatively, the cards may be slotted in to an optional PC card adapter or reader/writer and then transferred to the PC. Once on the computer, they may be effortlessly managed, edited or organised using the DSS Player Pro software supplied.

To help streamline the office workflow, there is the optional AS-3000 Transcription Kit. Besides the footswitch and headset, this also contains the DSS Player Pro software transcription module, which makes it easier for the secretary to type up the recordings.

DS-2200



Features

Storage media	Removable xD-Picture Card: 16, 32, 64, 128, 256, 512 MB
